

Your daily work

Start with your calendar. Open the client record for the next step and mark work complete when it is finished.

1. See what needs doing today

Home > Today / Calendar

1. Home opens your daily schedule. My tasks, Checks and Sections have separate tabs.
2. Open Calendar for your week or month. Select a date for the daily schedule.
3. Choose Date & filters to change the date or employee. All sections in the menu opens the other functions.

At 08:00 Madrid time, designated colleagues with open actions receive their personal email summary. Overdue and undated tasks appear below the calendar.

2. Give a colleague a task

Team messages

1. Choose New message / task and select the employee.
2. Describe exactly what needs doing. Start from a client record to link the message to that client.
3. Keep Also create a task selected and choose a deadline. Then send.

The message is private between sender and recipient. A linked task is visible in the team calendar. The recipient receives a CRM notification and a personal email.

3. Complete a task or appointment

Calendar

1. Tick off the task or appointment after doing the work.
2. Check whether another action is needed. Schedule it with a new date.
3. Use Reopen to undo an incorrect completion.

Completing a follow-up task also updates the client record. A separate action scheduled for the future remains in place.

Clients and collaboration

How to use the CRM

4. Follow up a real client request

Follow-up

1. The work list contains genuine requests, planned actions and client replies. Open the name.
2. Under Next step, choose Update. Enter the person responsible, action and date.
3. Use the Overview, Email history & drafts, Appointments and History tabs.

A newly assigned person receives an email. Remove contacts that need no follow-up from the work list; their records are preserved.

5. Write a suitable client email

Client record > Write an email

1. Own email / AI draft is the default. Write your own email or ask AI to create the subject and body using the record.
2. Check the recipient, wording, language, agreed location and any attachments.
3. Choose Review and send. Send only from the review window.

Saving a draft sends nothing. Only confirmed delivery automatically completes the current follow-up. Flexible Stone data sheets are included only with a Flexible Stone email.

6. Schedule the right meeting

Client record > Schedule an appointment

1. Enter the date and time confirmed with the client.
2. Enter the actual location or video link. Meetings may be at the client's premises, online or by phone.
3. Save and check the appointment in the calendar.

Adding an appointment to the CRM does not send the client an invitation. Confirm it yourself by email when needed.

Documents and administration

How to use the CRM

7. Find a client and their details

[Contacts](#) / [search at the top](#)

1. Search by name, company or email first to avoid duplicate contacts.
2. Open the contact. Tabs separate quotes, invoices and projects. Buttons open notes, the AI summary and financial overview.
3. Use Follow-up for work agreements. More actions contains the remaining actions.

Long forms use tabs. Your entries are retained when switching tabs. Review the details and choose Save.

8. Share the right document

[Quotes](#) / [Invoices](#) / [Price list](#) / [Retail partners](#)

1. Check details and amounts before downloading or emailing.
2. Choose English or Spanish for the download. Client documents use the recorded client language.
3. Use the client document for retail partners. The Our margin tab is internal only.

Downloading a PDF sends no email. Cost prices and internal contributions must not appear in the document for the retail partner.

9. Maintain projects and administration

[Projects](#) / [Purchase orders](#) / [Settings](#)

1. Open the project for status, progress and advance coverage. Margin & profit is separate; open Advances & payments to follow up a request.
2. Review incoming purchase invoices before approval. Never forward personal approval links.
3. Set your interface language to Dutch, English or Spanish. Ask an administrator if access is missing.

A success message confirms what was saved or sent. If email delivery is uncertain, check the mailbox first; do not send again without checking.
